

# Fall arrest system reaches new heights

Bomac Engineering's Altrac Fall Arrest System received the 2006 Innovative Product of the Year at the Manufacturers' Monthly Endeavour Awards.

Altrac – a lightweight, low-maintenance rail system – can be tailored to almost any application, including freestanding jib cranes, overhead bridge gantry cranes and fall arrest height safety systems. The system can be packed and shipped for quick and easy installation.

"When you contact Bomac you will speak directly with an engineer who understands all the standards you have to meet and has the technical know-how to put together a system to meet

your needs," said Bomac director Barry McFarlane.

"All of our design work is done in-house and all of our products are manufactured right here in Australia to ensure the integrity of the materials and therefore the overall safety of the finished system," he said.

The company's most high-profile fall arrest system is at the top of the ventilation stack for the Sydney cross-city tunnel in Darling Harbour.

Bomac will be exhibiting at this month's Safety in Action show at the Melbourne Exhibition Centre, from March 20-22.

## AWARD-WINNING SAFETY SYSTEM FOR ON-SITE EQUIPMENT MAINTENANCE

Innovative  
Industrial  
Product  
of 2006

- Great for Rugged Environments
- No Deflection on Rigid Rail
- Sealed-for-life Bearings Available
- Low-Maintenance
- Self-Cleaning
- Long Spans
- Multi-user

BOMAC  
Altrac

Altrac rail deflects less than 50mm, necessary when working at heights with a fall clearance less than 6.5m, such as maintenance work on large cranes and trucks. Call us today to discuss how to make your maintenance crew safer and more efficient.
